0.1 Template objects

Character string objects are defined which are used to fill templates when generating new files for a project.
A tentative default path is also included since this code relates to my own work.

```r
# For package 'projman'

# data

rmd.template <- "\n\n## Introduction\nADD_TEXT_HERE\n\n### Motivation\nADD_TEXT_HERE\n\n### Details\nADD

# default path
matt.proj.path <- "C:/github"
```
